

# Stimul'Ace®

Stimulates your natural defenses

## F.P.P.® Fermented Papaya An Extraordinary Ally

The weakening of our natural defenses with age, along with external environmental factors, leads to oxidative stress i.e. an imbalance between excess free radicals and a shortage of the antioxidants we produce (glutathion, enzymes).

Free radicals are continuously produced in our bodies and eliminated by our antioxidant system. When too many free radicals are produced our antioxidant defenses may be inadequate. Excess free radicals injure our tissues and cells, a bit like rust on metal. This is known as oxidative stress, the major cause of diseases linked to age, such as arthritis, age spots, cancer, asthma, cataracts, cardiovascular disease, joint disorders and degenerative diseases like Multiple Sclerosis and Alzheimer's disease.

F.P.P.® is the exclusive fermentation process of a tropical fruit, the Papaya. Only Osato laboratories' F.P.P.® results in a product with strong immunomodulating and antioxidant properties. F.P.P.® Fermented Papaya eliminates free radicals by supplying the enzymatic reactions notably for Superoxyde Dismutase and Glutathion Peroxydase that protect us against viral and infectious attacks.

For this reason, F.P.P.® Fermented Papaya is an effective ally that protects us in all situations where our health is threatened by a decrease of our immune and antioxidant defenses.

Multiple published scientific studies have demonstrated the effectiveness of F.P.P.® and its powerful anti-aging capacities. It therefore is a 100% natural protection against premature aging and a sure step towards reaching a better quality of life.

### The use of F.P.P.® is recommended in the following cases:

- Oxidative stress due to aging or environmental factors such as pollution, tobacco, alcohol, stress.
- Pathologies such as cataracts, diabetes, inflammatory disease, cardiovascular disease, Alzheimer's and Parkinson's disease.
- Disorders typical to the winter season such as coughs, flu, colds, sore throat, inflammation, fatigue.
- Premature skin aging, sun exposure, age.

### Testimonials:

"I am 52 years old and have been bothered by continuous colds and allergies for the past 12 years on a very regular basis. I was introduced to StimulAce by a friend who bragged its virtues. He gave me a few packets to try and within a few days I started to feel better than I had in years. My allergic reactions diminished and my overall well-being improved. I have now been an avid StimulAce user for over 6 months and I have been feeling fantastic. I have researched the benefits of the product and they are unbelievable. I recommend StimulAce to everyone." J. Fortin, Que.

"Hi, I am an elderly lady of 72 years of age and have been a smoker for the better part of my life. I quit smoking for over 10 years but could never get my energy up to be able to accomplish my everyday tasks. I also suffer from inflammatory disease that makes my life miserable. I saw an ad and ordered StimulAce and within a few days of using it my energy has increased and my pain decreased. I find myself doing things that I have not done in ages. My life is so much better. Thank you." A. Richards, Alb.

"I would like to tell you about my 15 year old daughter who recently suffered from Zona and mononucleosis. She was totally exhausted and had to stay in bed and away from school. Worried, I went to a health food store and a naturopath recommended StimulAce. To my surprise within 2 days of using it she was out of bed and 2 days later we were out hiking. I am completely sold on this product. I now have my entire family on it and we are feeling great." P. Drouin, Ont.
